

Overview of all src-img

Florian Sihler

September 19, 2026

Abstract

This document lists all images (tikz-codes) contained in this repository. All given paths are relative to `src-img/`. Text written in *this font* can be clicked and links to a file. Please note, that all of those links do **not embed** the file so they will work only if the repository is cloned as well and they are positioned properly (embedding would create an unnecessary large PDF-file...). Colors are defined by the *color-palettes*-Package.
